CLEAN ENERGY & MANUFACTURING INVESTMENTS: KENTUCKY'S SECOND DISTRICT

**C2ES** CENTER FOR CLIMATE AND ENERGY SOLUTIONS

Since 2022, there has been an energy and manufacturing boom spurring economy-wide benefits across the nation thanks to new and extended clean investments. Many of these tax credits have historically enjoyed bipartisan, widespread support in Congress. It's critical that these credits are maintained to ensure that these generational investments and the revitalizing of American industry can continue.

Kentucky's Second Congressional District

- $5.7 billion has been invested since Q3 2022.
- The 8th largest level of investment to date across all congressional districts in the nation.
- An additional $3.5 billion in announced but unspent investments and more than 14,000 jobs would be in jeopardy if energy and manufacturing tax credits are repealed or modified.

Clean Energy & Manufacturing Investments in Kentucky

Legend: ■ Invested   ■ At-Risk Investments

Kentucky-wide

- $8 billion invested in the state to through December 2024; $7.9 billion more announced and unspent, and potentially at risk.
- Investments are projected to create more than 28,000 clean energy and manufacturing jobs across Kentucky.

All investment and jobs data comes from Rhodium Group and MIT CEEPR's Clean Investment Monitor. Jobs totals from completed facilities include both construction and operational jobs; and outstanding job totals include both construction and operational jobs from facilities not yet online as of the end of 2024. Due to gaps in publicly available data, some investment and jobs data may be missing from each total. Project data can be found at energymomentum.us and additional energy price data can be found in reports by Brattle for ConservAmerica or Aurora Energy Research.

C2ES CENTER FOR CLIMATE AND ENERGY SOLUTIONS

The Center for Climate and Energy Solutions (C2ES) is an independent, nonpartisan, nonprofit organization working to secure a safe and stable climate by accelerating the global transition to net-zero greenhouse gas emissions and a thriving, just, and resilient economy.
