

CLEAN ENERGY & MANUFACTURING INVESTMENTS: NEVADA'S SECOND DISTRICT

Since 2022, there has been an energy and manufacturing boom spurring economy-wide benefits across the nation thanks to new and extended clean investments. Many of these tax credits have historically enjoyed bipartisan, widespread support in Congress. It's critical that these credits are maintained to ensure that these generational investments and the revitalizing of American industry can continue.

Nevada's Second Congressional District

- \$6.6 billion has been invested since Q3 2022.
- 63 percent of announced investments—\$11.2 billion out of \$17.8 billion—would be in jeopardy if energy and manufacturing tax credits are repealed or modified.
- 5th highest level of investment to date; 8th largest level of at-risk investment.
- More than 8,000 jobs from completed facilities with over 21,400 additional outstanding and potentially at-risk jobs.

Clean Energy & Manufacturing Investments in Nevada

Nevada-Wide

- \$10 billion invested in the state to through December 2024; \$20 billion more announced and unspent, and potentially at risk.
- Investments have spurred more than 12,900 clean energy and manufacturing jobs in Nevada with nearly 30,000 additional outstanding and potentially at-risk jobs.
- The 8th largest level of investment to date and the 4th largest level of at-risk investment in the nation.

All investment and jobs data comes from Rhodium Group and MIT CEEPR's Clean Investment Monitor. Jobs totals from completed facilities include both construction and operational jobs; and outstanding job totals include both construction and operational jobs from facilities not yet online as of the end of 2024. Due to gaps in publicly available data, some investment and jobs data may be missing from each total. Project data can be found at energymomentum.us and additional energy price data can be found in reports by Brattle for ConservAmerica or Aurora Energy Research.
